

NovaTech Solutions Enterprise Knowledge

Document: Git Guidelines | Department: Engineering | Classification: Internal

1. Branching

Use the feature branch workflow (e.g., feature/JIRA-123-add-login). Never commit directly to main.

2. Commits

Commit messages must follow the Conventional Commits specification (e.g., feat: add login endpoint).

3. Rebasing

Always rebase against main before creating a pull request to maintain a clean history.
